

securly://

Safety that goes beyond filtering

**The most sophisticated AI
engine in student safety**

“Securly has simplified my role completely – I can log into the management console from anywhere and from there I can look up a report, find information on any user, or modify access requests. It’s effortless compared to other solutions.”

Roger, IT Technical Director
Wheatley Park School, Holton, Oxford

“We were contacted from Securly advising that disturbing keywords had been identified, within seconds of receiving this we were able to identify the individual and communicate to one of the school’s Designated Safeguarding Leads that the individual in question was searching for ‘[best way to end my life](#)’ and ‘[how to end my life](#)’. The speed in which Securly made us aware of this meant that not only were we able to catch this quickly, but, it also meant that the Designated Safeguarding Lead was able to locate the individual in question.”

Right for Success Trust

Making online experiences safer for students and easier for you to manage

Keeping students safe online is no longer as straightforward as it used to be. As technology gets more sophisticated, so do the ways in which it can cause harm to young people.

This means that web filtering products that can block certain sites are no longer adequate.

You need a proactive safeguarding solution to protect students 24/7 that addresses the broader scope of threats such as bullying, self-harm, grief, indicators of suicide and school violence. But you also need something that's quick to deploy, scalable, easy to use, and works on all devices.

That's where Securly comes in.

Securly is the industry's first pure cloud web-based filtering solution

Securly is revolutionising school and student safety with an easy-to-use and quick-to-deploy cloud-based solution developed specifically for schools.

360 Cloud™ is an end-to-end student safety and device management solution that:

- Empowers safeguarding teams to keep students safe both on and offline
- Gives teachers and parents visibility and control of online activity to improve engagement and well-being
- Helps schools stay compliant with safety legislation

Thousands of students are safer today as a result of using Securly

360 Cloud://Safeguarding

Encompassing student safeguarding with
24/7 analysis of any dangerous activity

Keep your students safe on all devices with Securly's signature cloud-based web filter and AI-based scanning of Email, Docs, and Drive. Get full visibility into your students' online activity and receive notifications for flagged content and nudity with the most sophisticated AI engine in student safety.

Filter - cloud-based web filter for all devices

Securly is a new generation, cloud-based online safety tool, which means there's no need to buy hardware - everything is implemented and operated digitally. Check the real-time activity feed, download or email reports, and receive notifications for flagged content. Your IT team are able to reduce deployment time and stay up-to-date with software bugs and updates.

Auditor - real-time scanning of Email, Docs, and Drive

Securly utilises AI and sentiment analysis to monitor student social media, email, and cloud documents for activity that effects life offline, such as bullying, self-harm, and suicide. By analysing search engine queries and posts made on social media websites, Sentiment Analysis can detect the emotional sentiment behind the words being used, while applying contextual Intelligence to differentiate between benign and potentially dangerous language.

Once activity has been flagged, you can use delegated reporting and alerts to notify administrators within seconds when a student is at risk.

Tipline - Tip assessments to stay ahead of threats

With an average response time of three minutes, our alerts have included suicidal behaviour, imminent suicide threats, and calls for wellness checks. Securly's Tipline service also provides students the ability to anonymously report being bullied, as well as report anything they believe may be a threat or safety risk.

Trained in-house specialists, 24/7 monitoring

You'll be supported by a team of analysts with expertise in criminology, sociology and psychology who work 24/7 to review social media posts, websites visited, flagged emails, and Tipline data. They'll identify potential threats among your student population and alert your staff or local authorities to students who may be of risk to themselves, or somebody else.

360 Cloud://Management

Unparalleled classroom and
device management tools

Manage online classrooms and devices with one end-to-end solution built specifically for schools. Keep students on task and maximize every educational moment spent on school devices.

Seamless authentication

SchoolMDM allows teachers and administrators to share the management of Apple devices including iPads, Macbooks, and Apple TVs. That means there's one view for multiple devices, making it easy for IT managers to administrate, and giving teachers online visibility of the entire classroom.

Automatic syncing

ChromeTools works together with Google Admin Console to give teachers control of Chromebooks in the classroom. This enables teachers to quickly take charge, view student screens and tabs, open sites, and keep students focused and on task.

Tailored reporting

Rather than searching through reams of information that isn't relevant in order to find the details you need, you can set up the information you'd like to receive. Flag students you'd like to be monitored or apply more detailed alerts to certain students.

360 Cloud://Communnity

School, parent and community partnership

Wave goodbye to the stress that comes with sending school devices home, protecting personal devices, and screening on-campus visitors. From school to home, Securly has you and your students covered.

Parental controls for school-issued devices

With Securly, you can empower parents to take an active role in their children's online safety by offering them a fully integrated companion application that gives them visibility into their child's online activity on a school device. Parents can view their child's online activity, 'pause' the internet and set their own filtering rules.

Delivering student safety that goes beyond filtering

For the IT team

The IT team maintains control of the technical configuration of the system, and delegates access to reporting and alerting to the right member of staff at the right time.

Cloud deployment provides scalability from the smallest school to the largest MAT. No matter how much bandwidth you deploy, how much SSL traffic you generate, or how many users and devices you have, we scale the platform to perform. You can say goodbye to appliances and load balancers, as well as annual bandwidth upgrades.

For Senior Leadership, Designated Safety (DSL) and Teaching Staff

DSLs and teaching staff have access to a simple reporting engine and receive alerts, relevant to the students that they are responsible for. So alerts go to staff members closest to the student in crisis. Smart notifications and granular reporting help staff determine which alerts need immediate attention.

For parents

Securly allows you to extend monitoring to parents when children take their school device home. Parents can view their child's online activity, 'pause' the internet and set their own filtering rules.

Our mission: To protect children in any way we can

Securly was founded in 2013 with a single intention: to keep students safe online. Securly develops solutions that keep young people safe and engaged online, at school, and at home.

From tools that help adults create a child-friendlier Internet to an AI that recognises signs of bullying and even intuits risks of self-harm, Securly breaks new ground and innovates to meet modern problems head-on. For every child we empower to stand strong, for each kid that chooses hope over hopelessness, Securly is motivated to continue forging ahead.

Why we're different

- Securly introduced the first cloud web filtering solution because we know that digital safety is much more than filtering. It's about protecting young people at every touch point.
- We pioneered the use of artificial intelligence to deliver safeguarding solutions which monitor student social media, email and documents.
- We supplement artificial intelligence with our human safeguarding team, there to help schools identify risk 24/7.
- Through our acquisition of TechPilot Labs Securly has also become a leader in Mobile Device Management and Classroom Management tools.
