

Safety that goes beyond filtering

Unifying compliance and safeguarding in one cost-effective cloud platform

Traditional web filtering products are no longer sufficient to address today’s increasingly complex and ever-changing threats to students. Technology solutions such as web filters, classroom management and internet safeguarding tools offer important assistance. However, simply buying more and faster hardware and using multiple web filtering products is not only expensive, but ineffective.

It’s not just the cost of the technology that must be considered, but also its impact on the workload of your IT, Teaching, Leadership and Safeguarding teams who have to deploy, manage and use the systems. This means you need unified solutions that offer low-cost infrastructure, scalability, and are simple to operate and designed for use by your whole team.

Securly Filter is a cloud-based student safety solution which helps schools meet their safeguarding duties. At its heart is a web filter that ensures compliance for all devices in all locations, an AI engine which analyses all internet activity for student safety issues and a delegated reporting system which provides simple customisable filtering and safety reports and instant alerts directly to DSLs and teaching staff.

Features and benefits

- **Cloud-based** – which means there’s no need to buy hardware
- **Not just keyword-based** – AI and sentiment analysis detects more threats than legacy web filters
- **Delegated access to the right people** – so the alerts get to the right staff member in real time
- **Parental access** – delivering all encompassing student safety
- **Supports all devices in all locations** – making it much more cost effective
- **Efficient and detailed reporting** – you won’t waste time looking for the right data
- **Complies with UK e-safety and counter terrorism legislation** – giving you complete confidence

Greater cost efficiency and simplified administration

By consolidating your web filtering and student safety needs in the cloud, you simplify your administrative requirements, save budget and resource, and deliver all-encompassing student safety.

Reduced hardware implementation and support costs

With Securly there's no need to buy or maintain hardware, no need to deploy security patches or software updates. Our team install, configure and support the solution, leaving your IT team free to provide the services you want them to.

Unlimited scalability

Cloud deployment provides scalability from the smallest school to the largest authority. No matter how much bandwidth you deploy, how much SSL traffic you generate or how many users and devices you have, we scale the platform to perform. You can say goodbye to appliances and load balancers, as well as annual bandwidth upgrades.

Delegated admins

Our notification tools direct alerts to the right member of staff at the right time – so alerts go to staff members closest to the student in crisis. Smart notifications and granular reporting help staff determine which alerts need immediate attention. Our proven, rapid delegation has saved lives.

Parental access

Securly allows you to extend monitoring to parents when children take their school device home. Parents can view their child's online activity, 'pause' the internet and set their own filtering rules.

Simplified device management

Managing the student experience at the device level is the most effective way to keep students safe online, but managing all of those devices can be expensive and complex. Designed specifically for education, SchoolMDM makes device management easier and more cost effective.

Unlimited data retention and reporting in seconds

There are times when you need to follow a trend of behaviour for a student as you investigate their online activity. If you need the data, you'll always have it, without running user-audit reports that are limited and time consuming.

“Securly has simplified my role completely – I can log into the management console from anywhere and from there I can look up a report, find information on any user, or modify access requests. It's effortless compared to other solutions.”

Roger, IT Technical Director

Wheatley Park School, Holton, Oxford
