

Safety that goes beyond filtering

Unifying compliance and safeguarding in one simple-to-operate cloud platform

Keeping students safe online is no longer a straightforward task. As technology gets more sophisticated, so do the ways in which it can cause harm to students. This means you need protection capabilities that can overcome scalability limitations, bandwidth bottlenecks and SSL filtering problems.

You're tasked with providing web filtering and online student safety solutions, which means you need a solution to meet your technical requirements, that's simple and cost effective to deploy and manage.

Securly Filter is a cloud-based student safety solution which helps schools meet their safeguarding duties. At its heart is a web filter that ensures compliance for all devices in all locations, an AI engine which analyses all internet activity for student safety issues and a delegated reporting system which provides simple customisable filtering and safety reports and instant alerts directly to Designated Safety Leads (DSLs) and teaching staff.

Features and benefits:

- **Cloud-based** – which means there's no hidden hardware costs and it's simple to deploy
- **Integrates with existing directory services** - making implementation quicker and easier
- **Eliminates filtering bottlenecks** even in heavy use SSL environments
- **Provides a single central solution** for multi-site environments
- **Supports all devices** – including Chromebooks both in and out of school
- **Complies with UK e-safety and counter terrorism legislation** – giving you complete confidence
- **Not just keyword-based** – AI and sentiment analysis detects more threats than any other solution on the market
- **Tailored reporting leads to accurate results and reduces false positives** – saving your busy staff time

Reduced hardware implementation and support costs

With Securly there's no need to buy or maintain hardware, no need to deploy security patches or software updates. Our team install, configure and support the solution, leaving your IT team free to provide the services you want them to.

Unlimited scalability

Cloud deployment provides scalability from the smallest school to the largest authority. No matter how much bandwidth you deploy, how much SSL traffic you generate or how many users and devices you have, we scale the platform to perform. You can say goodbye to appliances and load balancers, as well as annual bandwidth upgrades.

Any device, any user, anywhere

In school, at home, or in between. Using Chrome-OS, Windows, MAC, iOS, Android, your staff, students and guests can operate safely anywhere.

Greater cost efficiency and simplified administration

Managing and maintaining disparate point solutions is costly and adds complexity. By consolidating web filtering and student safety needs into a single cloud solution, ongoing costs are reduced.

Unlimited data retention and reporting in seconds

There are times when you need to follow a trend of behaviour for a student as you investigate their online activity. If you need the data, you'll always have it, without running user-audit reports that are limited and time consuming.

Delegated access

Securly provides a delegated admin and reporting solution, which distributes the overhead and benefit of administration directly to the right person at the right time. The IT team maintains control of the technical configuration of the system, and delegates access to reporting and alerting to the appropriate people in each location.

“Securly has simplified my role completely – I can log into the management console from anywhere and from there I can look up a report, find information on any user, or modify access requests. It's effortless compared to other solutions.”

Roger, IT Technical Director

Wheatley Park School, Holton, Oxford
