

Safety that goes beyond filtering

Monitoring online activity to support student safety professionals

There's no denying that technological advancements are creating new and bigger problems for those responsible for ensuring student safety. For example, while bullying was once limited mostly to the hallways and playground, cyberbullying is now pervasive online and over digital devices.

This means that web filtering products that can block certain sites are no longer adequate. They often focus on just one type of threat and rely heavily on the keyword or phrase searches that won't pick up on more nuanced threats or coded language.

You need an intuitive and integrated approach that enables real-time alerts and insights, actionable intelligence, and the ability to collaborate closely to protect students from online and offline threats without extensive manual report creation or other intervention.

Thousands of students are safer today as a result of using Securly

Online activities monitored

“We were contacted from Securly advising that disturbing keywords had been identified, within seconds of receiving this we were able to identify the individual and communicate to one of the school’s Designated Safeguarding Leads that the individual in question was searching for ‘**best way to end my life**’ and ‘**how to end my life**’. The speed in which Securly made us aware of this meant that not only were we able to catch this quickly, but, it also meant that the Designated Safeguarding Lead was able to locate the individual in question.”

A full suite of safeguarding tools

Securly is more than a web filter, it provides a suite of safeguarding, classroom management and device management tools to keep students safe, and give staff the control they need at all times.

Securly's unique AI and sentiment analysis detects alerts and reports on safety issues which are found or indicated within social media, email, cloud documents, and files. By identifying and alerting on issues such as bullying, self-harm, grief, nudity and indicators of suicide, Securly can use the online environment to improve the lives and safety of students in the physical world.

The proactive way to help students at risk

With Securly, DSLs and teaching staff have access to a simple reporting engine and receive alerts, relevant to the students that they are responsible for. So alerts go to staff members closest to the student in crisis. Smart notifications and granular reporting help staff determine which alerts need immediate attention.

The Securly solution can detect the emotional sentiment behind the words being used, while applying contextual intelligence to differentiate between benign and potentially dangerous language. For example, "I don't know how much longer I can take this" will be triggered, but "to kill a mockingbird" will not.

Our 24 Team – supporting staff and making detection easier

Securly combines our signature cloud-based web filter with the best 24/7 human-enhanced AI on the market. We use both artificial intelligence and our team of highly-trained specialists with expertise in criminology and psychology to analyse flagged notifications 24 hours a day, 7 days a week.

When a flagged activity comes up, the team will search and analyse a student's search history to identify patterns. Something relatively minor might provide important details about a student's current mental state. When an alert is determined to be urgent, the 24 Team follows an escalation process to notify the school.

Parent access

Securly allows monitoring to be extended to parents when children take their school device home. Parents can view their child's online activity, 'pause' the internet and set their own filtering rules.

Delegated reporting – notify staff within seconds

Securly is not just for the safeguarding team. As a combined web filter and safeguarding solution it offers a compelling proposition for your finance manager, and its cloud architecture and delegated administration simplifies life for your IT team.
