Parent partnership made easy

Securly Home is a free add-on included with Filter that allows you to give parents control over their child's school device at home. Set customisable features to give parents the confidence they need to take control of their student's screen time at home. Wave goodbye to the stress that comes with sending school devices home.

Features

Multi-language support
Securly Home defaults to the language settings of a parent's personal device.

Admins customise the level of control for...
- **Parent visibility:** You choose what activity parents can see on their child's school-owned device. Whether it's restricted to only home activity, educational activity, or all activity, parents can check the live feed anytime with the app or web view.
- **Filtering rules:** Depending on the level of control you set, parents can customise their own filtering rules when their child's school device is at home.

Giving parents the ability to...
- **Schedule offline times:** Parents can set schedules for when the internet is off-limits. Perfect for bedtime.
- **Check online activity:** Allow parents to view their child's recent searches, sites visited, and videos watched on their school-owned device.
- **Customise rules:** Their house, their rules. Let parents customise filtering rules when school devices go home.
- **Pause internet access:** Parents can use the Securly Home app to turn internet access on or off with a single tap when the device is away from school.
- **Opt-in for notifications:** Parents can opt-in to receive flagged activity notifications for their child. This includes signs of bullying, self-harm, and violence.
- **Get weekly email reports:** Every week, parents receive a snapshot of their child's online activity, directly to their inbox.
