

## Filtering and Monitoring Made Easy For DSLs

Securly Filter, is a cloud-based web filter designed exclusively for schools. It helps schools keep students safe on line and meet the DFE KCSIE guidance on filtering and internet and web access monitoring.

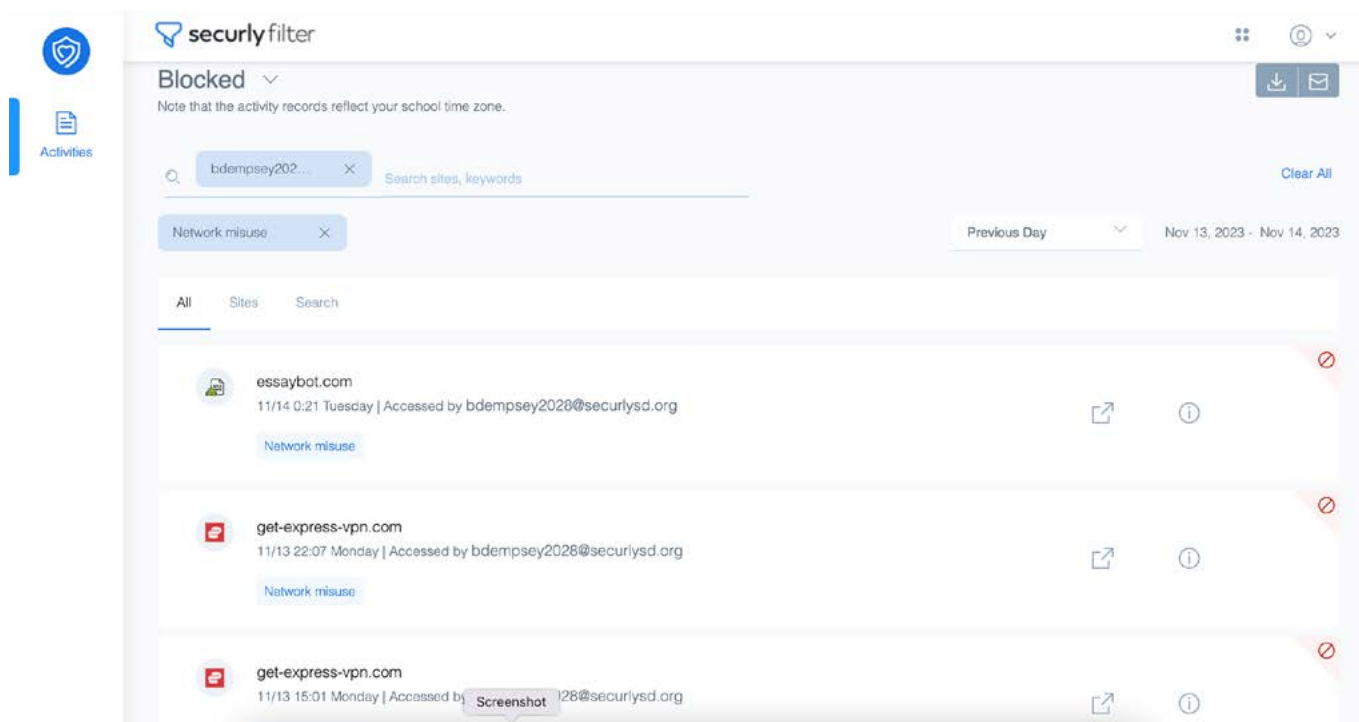

Securly Aware is a student wellness active monitoring solution that helps schools meet the DFE KCSIE guidance on monitoring. It scans student online activity for indicators of risks such as bullying, violence, self harm and suicide.

Securly's filtering and monitoring solutions support delegated administration enabling network administrators to allow DSLs and teachers to view logs and create and share their own reports on student activity. The solutions are designed for schools and are simple for non technical staff to use. Securly provides instant alerts to delegated administrators and implements technology such as AI, sentiment analysis and confidence scores to minimise false positives.

### Self Service Filter Reports for Teachers

The teacher view of the Filter dashboard provides a complete activity log showing every search and every website visited, or blocked by the filter, for all students delegated to the teacher / DSL.

Using an intuitive interface the activity log can be refined by the teacher to show activity by pupil or organisational unit, by filter category, and for given time windows. This enables staff to create custom reports, and save them or share them via email.

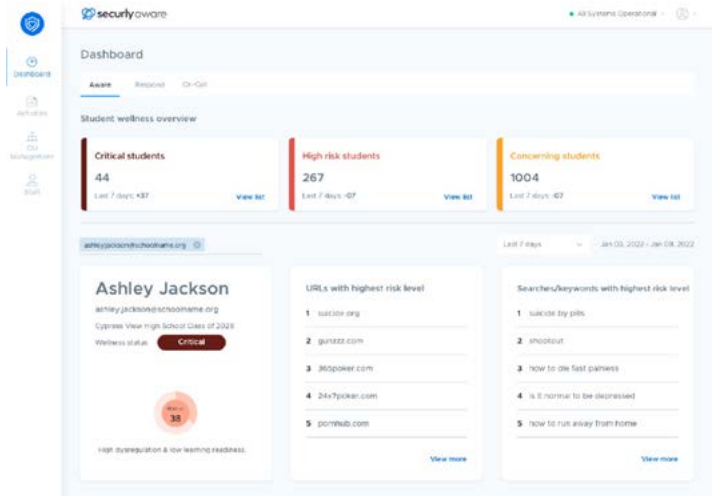

## Wellness Dashboard

The Aware dashboard gives you a broad picture of student wellness, flagged activity trends, and detailed information on any student for any time frame enabling teachers and DSLs to quickly identify students who may be in need of help.

Aware takes the Active Monitoring Alerts and presents them in manner that minimises time taken to monitor and investigate student wellness. It gives an instant visual overview of student wellness, in the Student Wellness Overview.

Staff can drill down to view detailed information on any student for any time frame.

### Identify students at risk

Easily understand which students in your school or district are in need of intervention, so you can use your resources effectively.

### Know what intervention students need

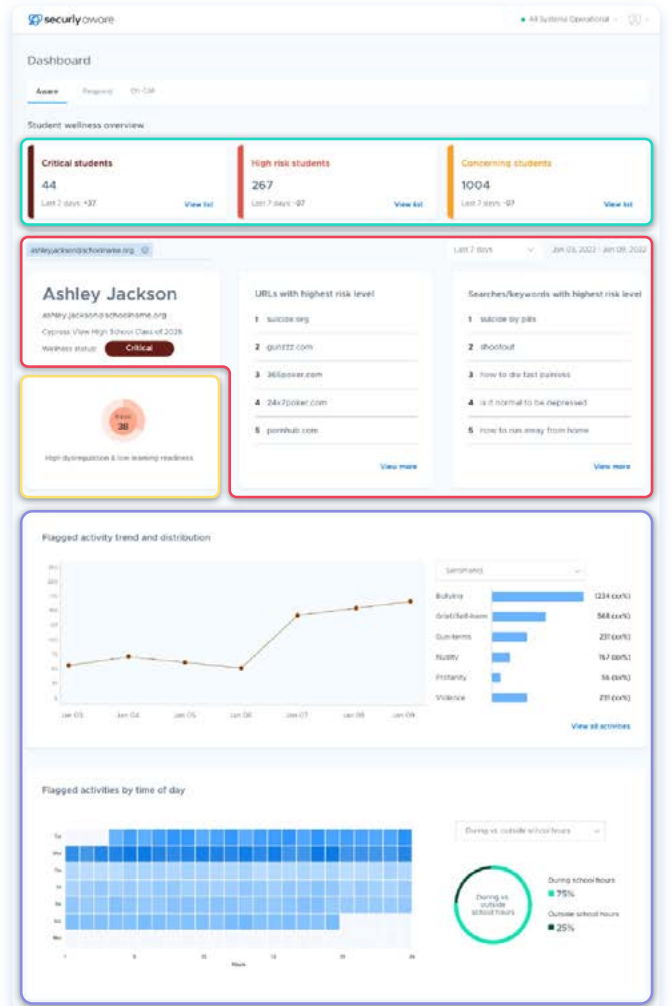

Analyze any student's flagged activity to know what they're struggling with, and provide proactive help.

### Integrate self-reported wellness data

Gain additional context for student wellness levels with self-reported data from Secury Rhithm.

### Prevent bullying, grief, and self-harm

Dig deeper into flagged activity data for any time frame and visualize district-wide wellness trends with easy-to-read charts and breakdowns.
