

Make Web Filtering & Monitoring on iPads Effortless

Securly provides a robust, cloud-based filtering and monitoring solution specifically designed for iPads. KCSIE-compliant and aligned with GDPR and DfE guidelines, Securly provides iPad users comprehensive safety and wellness support on 1:1 or shared devices – whether in school or at home. Providing sophisticated security and reporting no matter your browser, Securly makes online student safety simple with iPads and tablets.

Get the power of SmartPAC with Securly

Securly uses patented SmartPAC technology to filter and monitor iOS and MacOS devices. SmartPAC is seamlessly deployed via MDM solutions, ensuring users are automatically authenticated to provide user-based reporting and alerts.

- **No agents or apps**

SmartPAC is extremely lightweight at around 8kb in size. It never needs to be updated or patched when iOS updates roll out. Deploy it once, and you're done.

- **100% cloud**

No more proxying traffic back to the school or reliance on an onsite appliance. SmartPAC is completely managed in the cloud and is the perfect solution for iPads.

- **Authentication headaches are a thing of the past**

We support modern Identity Providers such as Google and Azure, as well as SSO. SmartPAC also allows for deep integration with your MDM or Active Directory, allowing for a zero-touch authentication experience.

- **Browser, device and firewall agnostic**

Running an older version of iOS? Have Safari and Chrome on your iPad as well? That's no problem with SmartPAC. With Securly, you're able to use any browser and still keep your students' online activity filtered and monitored.

Securly also provides...

- **Comprehensive user-level reporting and alerts**

Empower DSLs with access to detailed insights into student internet usage, allowing them to make informed decisions, create and distribute reports, and foster a productive learning environment.

- **Offsite filtering and monitoring**

Extend student protection beyond your school grounds. Whether at home or on the go, Securly enforces the same safety policies and alerts.

- **No more browser bypassing**

Rather than relying on a bespoke browser or custom application, Securly works with all browsers, helping to ensure students won't bypass your security measures.

- **AI Chat for Securly Filter**

Empower your students with safe, appropriate and supervised use of generative AI tools while keeping your school compliant with the DfE guidance on generative AI usage.

Make compliance simple with cloud-based iPad filtering and monitoring for UK schools

With easy setup, expert support, simple-to-use reporting tools and UKSIC accreditation, Securly is designed with UK schools and MATs in mind. Keep your students safe at school and at home, no matter their device.
